

## Examining Rocks

Planet Earth is made of many. We have learned that the Earth's rocks are part of a cycle known as the rock cycle. In the tray in front of you are 8 numbered rocks. Examine each rock. In the columns below thoroughly describe each rock. Describe color, texture, weight, etc... Next determine which type of rock it is, igneous, sedimentary or metamorphic, based upon your observations and notes you took in class. Finally give a just reason as to your selection of the type.

Rock #	Description	Type	Reason
